The Remo-Wooldridge Corporation Los Angeles, California

Gentlemen:

Reference is made to recent discussions concerning System IV AGC sircuits and associated Ground Readout Equipment.

The present amplitude modulated AGC data system should be preserved, and your proposal for a change to frequency modulation is not acceptable. The N rack is to be modified so as to make available simultaneously to the analyst an either normal (3.75 ips) or duping speed (15 ips) the direct current analogue voltages obtained from the amplitude modulated AGC tones of all eight super-hetrodynes receivers in System IV. These voltages should be suitable for presentation on a direct recording oscillograph such as the Brush. With the addition of this modification production should proceed on the M and M Rack read-out equipments as presently designed.

Very truly yours,
